

# How to edit a picture with Gimp for Oknitme software

**ENG  
LISH**

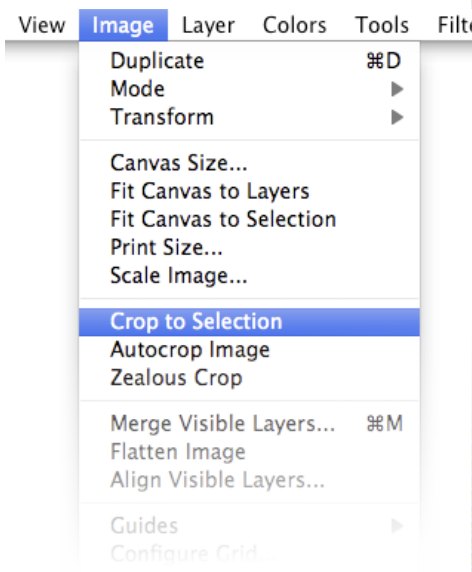

**tutorial**

## 2 Foto editing Gimp

### Open and crop

Open your image from the  
*File menu > Open*

Crop the image excluding what you don't need with  
*Rectangular selection tool* and the command in the  
*Image menu > Crop to selection*

### 3 Photo editing Gimp

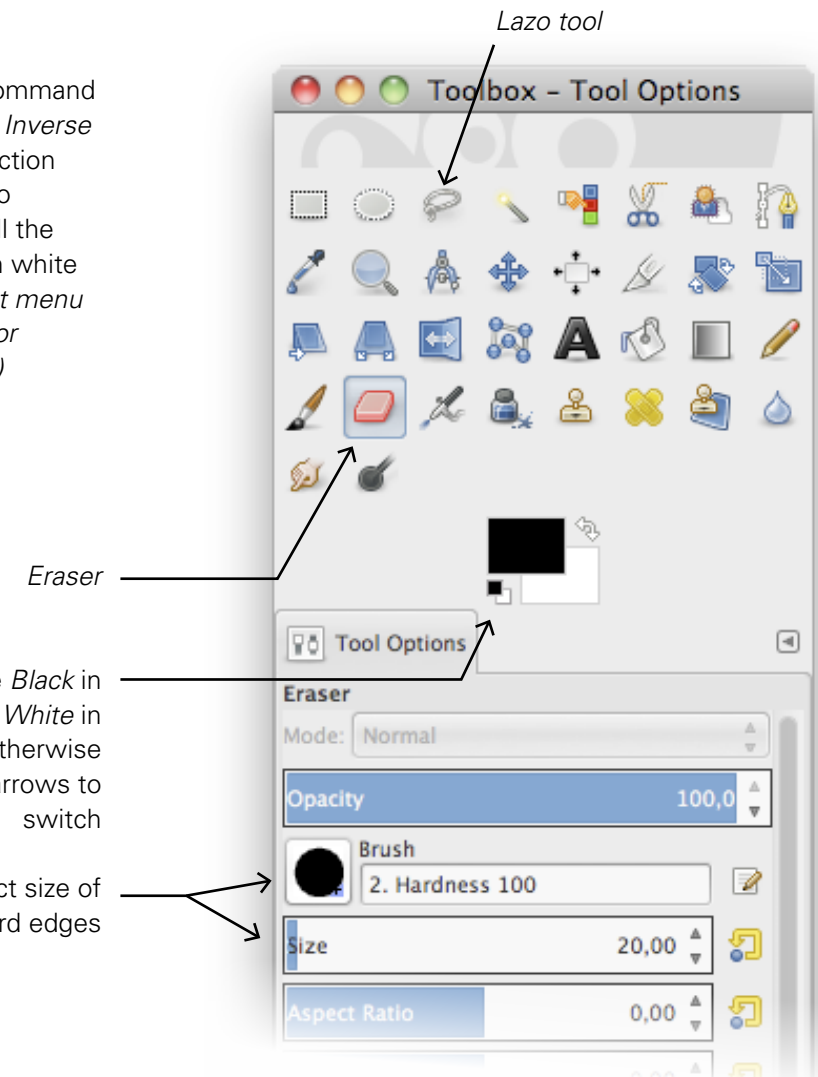

How can you select and clip at the best? Follow this tutorial on Youtube [click here](#)

### Clipping

Use *Eraser* tool to delete directly what you don't need, without select. Or select the image quickly with the *Lazo* tool...

... then use the command *Selection menu > Inverse* to switch the selection from foreground to background and fill the selected area with white color from the *Edit menu > Fill with BG Color* (background color)

## Grids

If you take a look at the shapes: the grid of the punchcard has a squared shape but the knitted fabric knit is rectangular.

In order to obtain a proportional illustration on the knitted fabric, we'll have to shrink the width of the drawing before feeding it to Oknitme software.

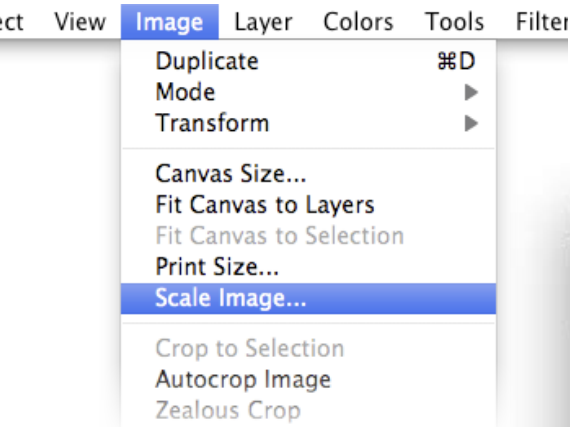

The correct image should be horizontally reduced by 75-85% circa (depending on the thickness of yarn and tension of machine).

Once you knit the jaquard image using the punchcard, the illustration will reach correct proportions.

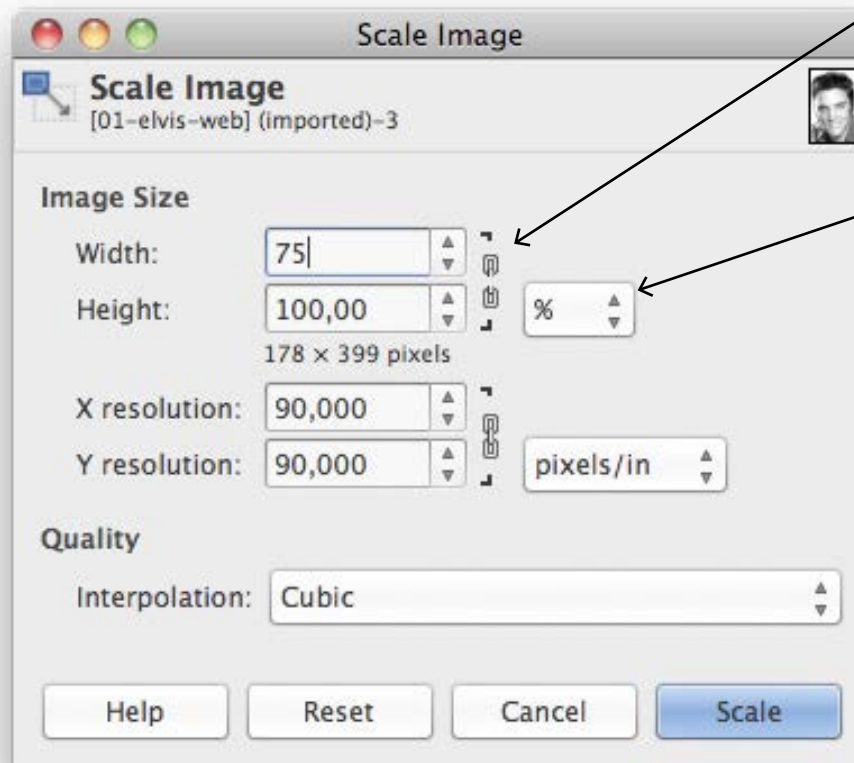

## 5 Photo editing Gimp

### Shrink image by changing proportion

Change size and proportions  
by choosing from *Image*  
*menu > Scale image...*

Click on the chain to  
release the proportions  
between Width and  
Height

Choose the percent mode  
here and input in the  
Width field about 75-85%  
(Height stays at 100%)

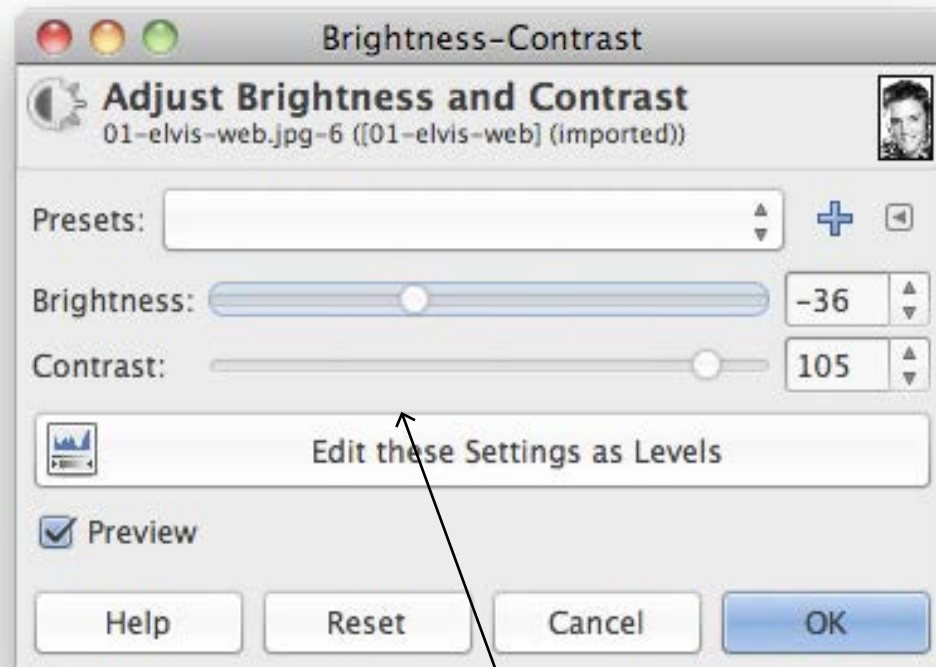

## 6 Photo editing Gimp

### Contrast

Contrast the picture  
using the *Colors menu >  
Brightness and Contrast*

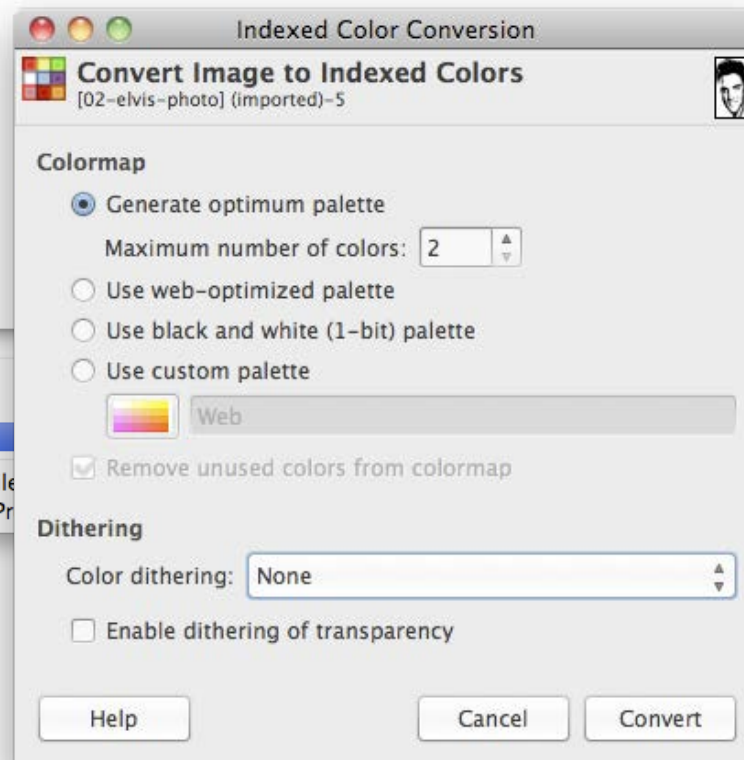

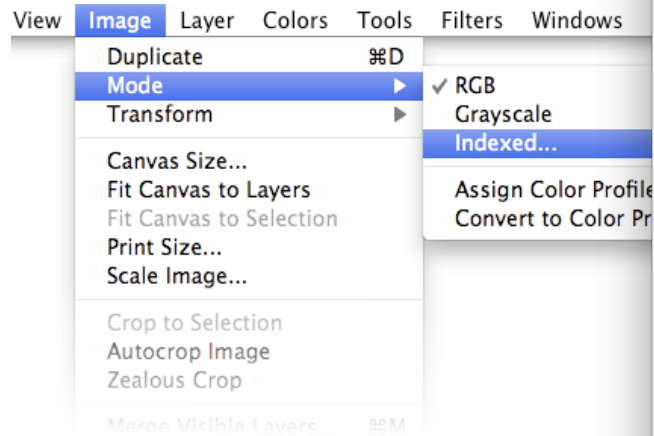

Edit the values of lights and  
shades moving the bars,  
until you reach an image  
with low levels of grey

## 7 Photo editing Gimp

### Convert to Indexed

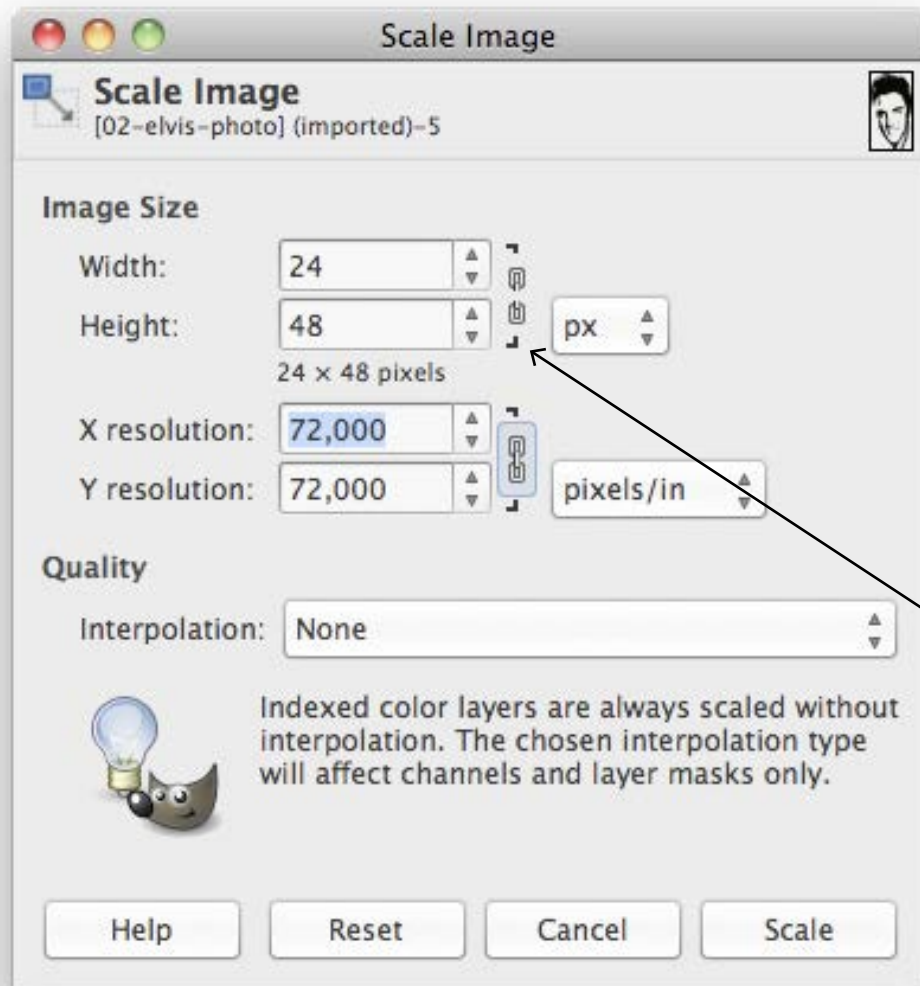

Change image mode by  
choosing *Image menu >  
Mode > Indexed...*

...and input 2 colours (black  
and white) in the *Optimum  
palette* or choose  
*Use black and white (1-bit)  
palette*

*With this command Grey  
scale or other RGB shade  
pixels will disappear*

## 8 Photo editing Gimp

## Scale image

In the *Image menu*  
> *Scale image*

resize image to fit the  
size of the punch card:  
input 24 pixel (stitches)  
for width, and 48 or 60 px  
(rows) for height

Click on the  
chain to release  
the proportions  
between width  
and height

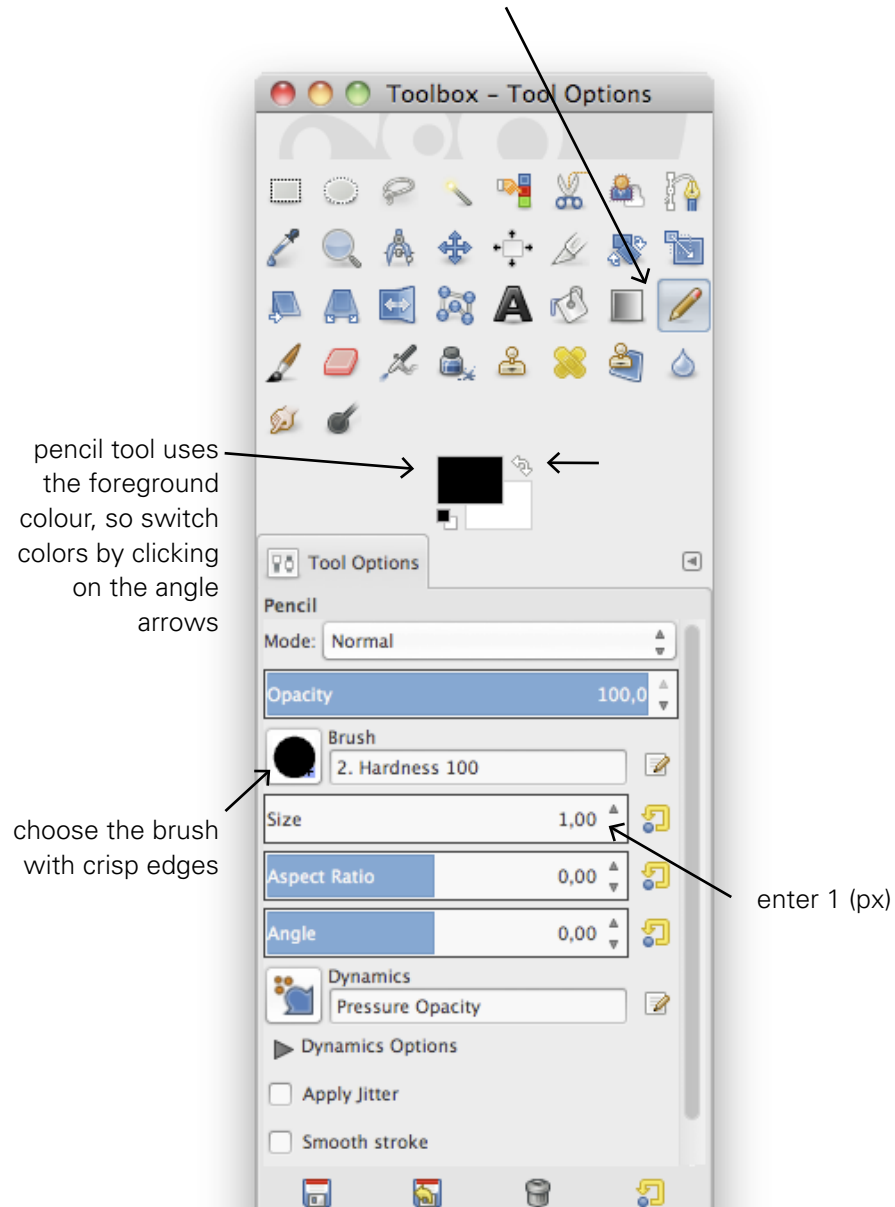

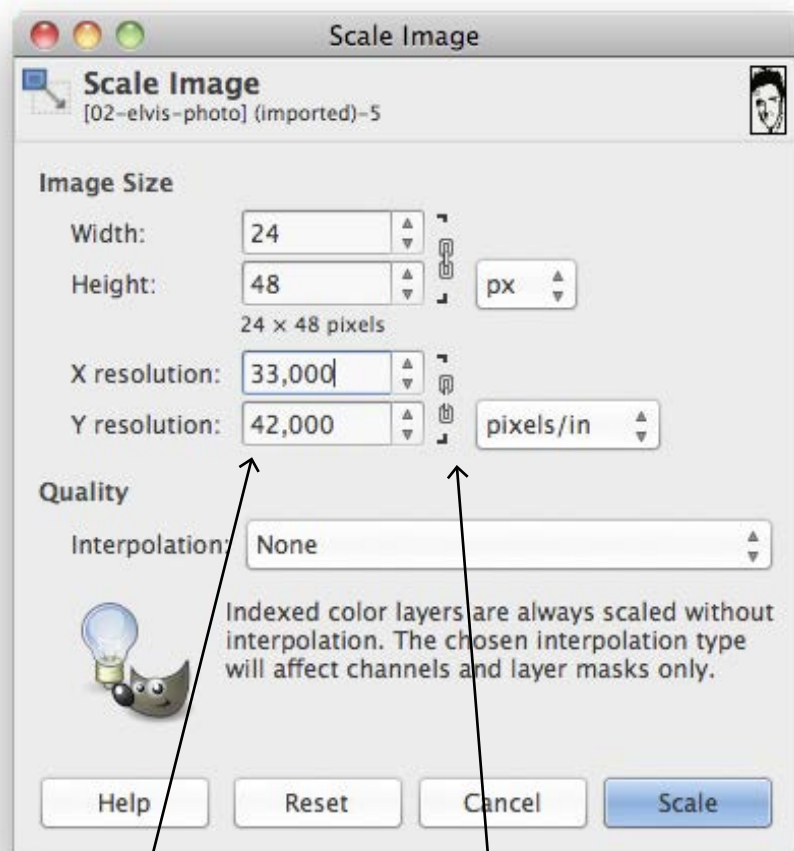

## 9 Photo editing Gimp

### Pencil tool

Edit your image pixel-by-pixel with *Pencil tool*

## 10 Photo editing Gimp

In *Resolution* fields write the values of your knitting gauge sample: for eg here I entered 33(X) and 42(Y) because I have 33 sts for 42 rs, in 10 cm (4 in)

Click on the chain to release the proportions between width and height

## Rectangular pixels

If you want verify your project, you can change pixels from squared shape to rectangular.

This step is just a mode to visualize your image, that you can activate or de-activate with the command *Dot for dot* in the *View menu*. Actually Gimp will export an image with squared pixels, correct to be processed with Oknitme software:

in the *Image menu* > *Scale image (Resolution fields)*, write the width and the height of your knitted swatch (or the proportion between width and height)

then in the *View menu*, uncheck the command *Dot for dot*: now pixels have a rectangular shape

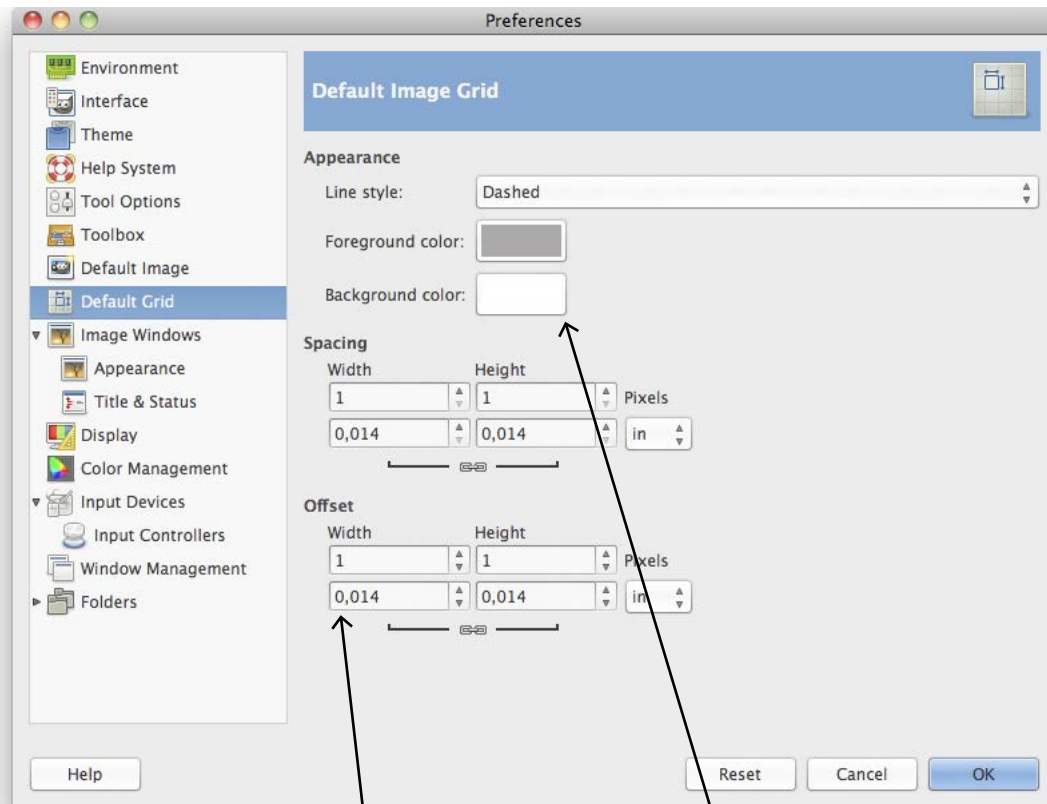

# 11 Photo editing Gimp

## View grid

You can better count pixels displaying the *Grid* in the *View menu*. You can also change the Grid viewing mode from *Gimp menu > Preferences*. In the left column click on *Default grid* and change the values as we suggest

In some versions of Gimp, you need restart the software to view the changes of the Preferences panel

enter 1 px in Spacing and Offset fields

click in these two fields to change color of dash lines as we suggest (grey and white)

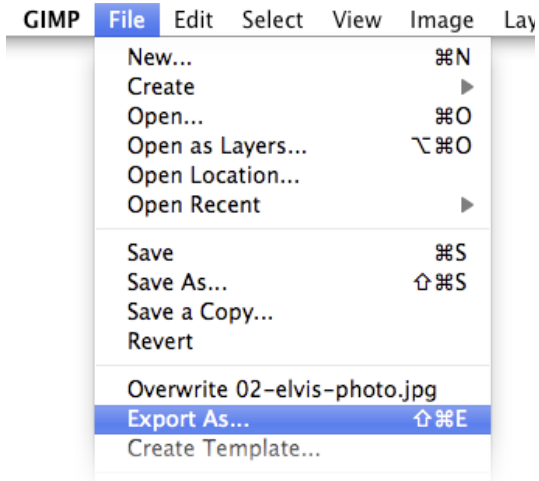

## 12 Photo editing Gimp

### Export as

When you are happy of the results, you're ready to save the image in *File menu > Export as...* and choose JPEG o PNG format

Remember that white pixels correspond to full spaces in punch card, so white will be the main/background color in the knitted fabric. Black pixels (holes in punch card) will be the second/contrast color in the knitted fabric.

If you prefer, you can switch main-to-contrast color before Export and quickly obtain a negative image with the command: *Colors menu > Invert*

Open the menu and choose the destination format, JPEG or PNG

main yarn/white pixels

contrast yarn/  
black pixels

13 Oknitme

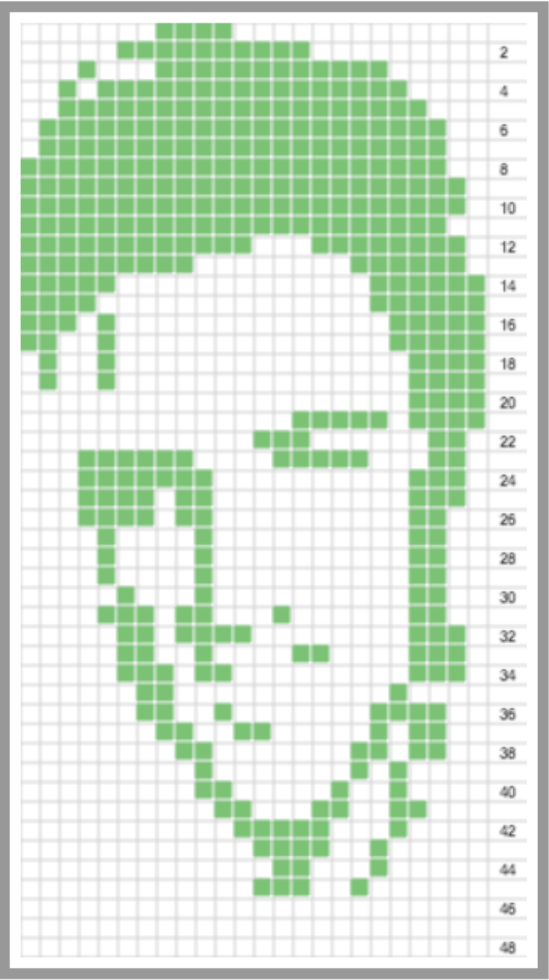

<http://oknit.me>

Upload image

Upload your image from Oknitme home-page using *Browse here* (or drag and drop on the dotted box)

Push the *Do the magic* button to see the transformation.  
The image becomes a squared grid

If you want to make some changes, you can edit the grid pressing on *Edit*:

you can add or delete dots or move, rotate e reflect the whole image

When you are happy with it, save it with the *Lock button* and click on *Punch-it* to create the digital punchcard

## 15 Oknitme

## Download, cut, knit

Download

Download the SVG and cut the punchcard using a plotter or lasercut in your local fablab

The punchcard is ready to be used on the knitting machine to create a jacquard piece

Remember that the plain is background color and dots are contrast color
